Overview of all your units in one screen

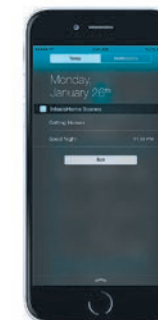

Control & Monitor your AC from anywhere

Save energy & increase confort with the calendar

Quick acces to your scenes from the control center

IH2015v1

What is IntesisHome?

It is the most advanced solution to remotely manage an Air Conditioning system using all sort of mobile devices such as Smartphones, Tablets and PC.

How does it work?

- The Air Conditioning units (AC) are controlled from a webpage or using an iPhone, iPad or Android APP in a very intuitive way.
- A wireless (Wi-Fi) device installed in each unit controls the operation.
- A Server in the cloud manages the whole process.

IntesisHome is open!

- IntesisHome offers a secure public API (Application Programming Interface). Third party services or companies can use our advanced infrastructure to control the air conditioning units from their own system, offering to the end users a new and exciting experience.
- IntesisHome is also compatible with IFTTT service, now you can create your recipes (location, weather, etc) to control your air conditioner.

Control your Air Conditioner from anywhere

- Turn the AC on before arriving home.
- Change the program if the user is arriving late.
- Know the current room temperature of your home.
- Check if the unit is still on once out of the building and turn it off.
- Know the electrical consumption of the unit. (Depending on the AC brand)
- Program the AC with a calendar scheduler in an easy and intuitive way.
- Save your favorite Scenes and execute multiple actions with a single tap.
- Get instant errors and user defined alarm notifications.
- And many more...
